

Przemysław Dabrowski

+1 (727)-509-1671 – przemyslaw@przemyslaw.org – przemyslaw.org – <https://github.com/rcrdlbi>

Profile Full stack web developer interested in design and new or refactored concepts. Fluent in Ruby on Rails, JavaScript, React, Redux, and Bootstrap, with 6+ years of desktop Linux administrative experience. I positively contribute productive and detailed work to teams of all sizes.

Projects Calorie Tracker [Github](#) – [Demo](#)
Rails-Based MVC nutrition tracking web app, user data stored in PostgreSQL via ActiveRecord, interface CSS provided via Bootstrap, OAuth-based Facebook login, traditional email/password logins secured with bcrypt.

World Factbook [Github](#) – [Demo](#)
React application with data persistence handled through Rails API backend, locations rendered using an SVG map, detailed country information loaded via Wikipedia API, plus a currency exchange rate converter. State held in Redux, interface built using custom responsive CSS.

XCNT Code Challenge [Github \(Frontend\)](#) – [Github \(Backend\)](#)
Rails-based GraphQL API, listens to an HTTP stream of JSON objects provided as part of the challenge, saves to PostgreSQL DB, React frontend with Relay-style pagination to provide a sortable/filterable/searchable infinite scrolling feed.

Scoutbase Code Challenge [Github](#)
React web app, queries Scoutbase's GraphQL API using Apollo to retrieve information about various countries, displayed on a layout made using styled-components

Work History Web Developer, Tech Data – Jan 2020-Current

- Developed multiple high-profile B2B marketing experiences for a wide group of major electronics companies, primarily using HTML/CSS/JS/jQuery, as well as an array of marketing and analytics tools
- Wrote and deployed a serverless vanilla JS application to allow users to search and filter upcoming industry events, and a react-based tool allowing non-technical team members to add and manipulate it's content
- Worked with UX Designers and copywriters to deliver an easy to use, on-brand experience under intense time and budget constraints

Full-Stack Web Developer, CodeChimps – August 2019-Dec 2019

- Recreated the functionality of an unstable Wordpress-based e-commerce application entirely in Rails
- Created multiple JAMStack-based static sites using Jekyll and implemented ForestryCMS to allow clients to update content on their own
- Designed CSS layout, updated content, and performed backend maintenance on various Wordpress sites

Linux Blockchain Network Development Engineer (Side Project) – 2018

- Administrated, troubleshooted, and maintained Ubuntu SSH Server and cross-platform SSH tools
- Upload/Download backend of cryptocurrency for testing and validation of transaction using ERC20 tokens
- Oversaw creation of Linux usergroups
- Created bash scripts
- Troubleshooted network issues across platforms
- Wrote tutorial to get a team using a command line for the first time to connect to and interact with a Linux-based SSH Server without needing to ask for clarification

Intern, MGF Law Firm; Clearwater, FL – 2016-2018

- Bulk digitizing of paper documents
- Use of Microsoft Access database
- E-filed confidential legal documents with Florida court database
- Pulled legal information from Florida court database

Genetics Department Contractor, SSC Soft Computer; Largo, Florida – Summer 2015

- Tested genetics laboratory information management software on client end
- Handled related documents

Education Flatiron School – Full Stack Web Development Program, 2019

St. Petersburg College – Partial Computer Science Degree, 2017-2018

Skills Ruby on Rails, Javascript, React, Bootstrap, REST, GraphQL, HTML/CSS, Sinatra, OAuth, Linux/Windows/Mac/iOS use, 3 years bash shell experience
